

# PoliGlassBead

Fine Polishing Filter

The PoliGlassBead uses true glass beads instead of crushed glass like some glass filters. Why? Glass Beads won't bond together like crushed glass making backwash difficult. A GC Tek exclusive.

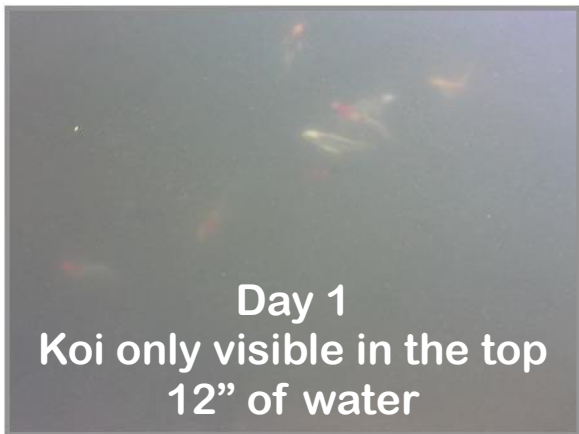

**2 Types of Media**  
Glass Beads for a Super-Fine Polish  
AlphaBio2 for Fines PreSeparation

The PoliGlassBead filter is a unique polishing filter that uses 2 types of media, the AlphaBio2 media for preseparating the larger solids on the way down to the finer PoliGlassBeads for a super polish.

These beads filter down to 3 microns. Available in 4 sizes for ponds up to 30,000 gallons.

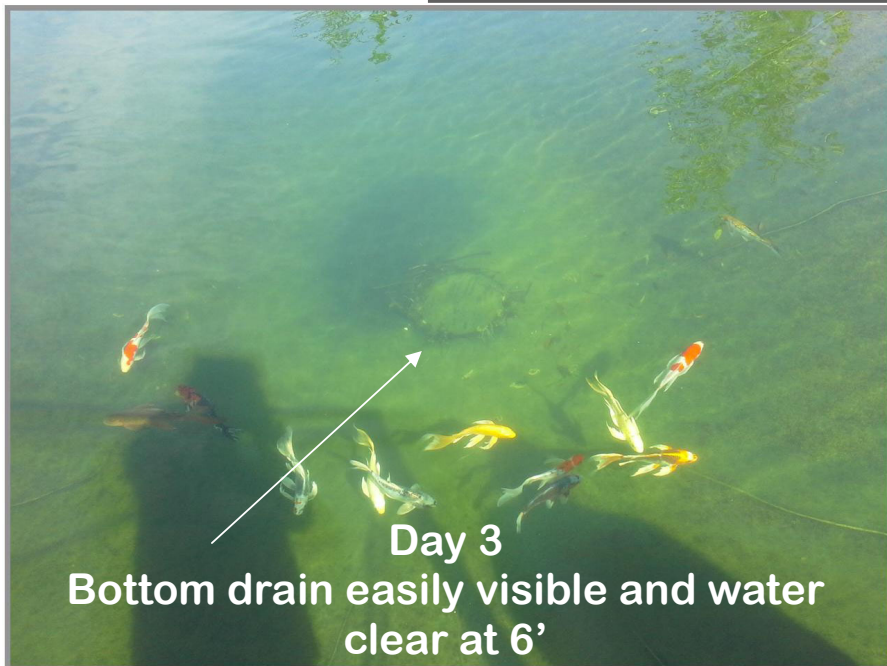

*Take a look at the pictures for the real proof*

**Day 1**  
Koi only visible in the top 12" of water

**Day 2**  
Bottom drain visible at 6'

**Day 3**  
Bottom drain easily visible and water clear at 6'

Test pond is 10,000 gallons and was filtered using the PoliGlassBead5K— a filter that was half the suggested size!

- PoliGlassBead5K.....for ponds up to 5000 gallons..... 1995.00
- PoliGlassBead10K...for ponds up to 10,000 gallons.....2325.00
- PoliGlassBead17K...or ponds up to 17,000 gallons.....2995.00
- PoliGlassBead30K...for ponds up to 30,000 gallons.....3799.95

The PoliGlassBead filter is designed as a polishing filter only and is not intended as a stand alone filter. While you can run water through it all the time if wanted we normally recommend plumbing the Glass Bead as the last item in the filtration system and plumb it with a 3 way valve to easily divert water to the Glass Bead as is needed for a super polish.

Add one to a PLUS system or Mashimizu at time of order and we can plumb into the system.
